Dept of Medical Physics,  
Royal Perth Hospital,  
Box 2213 GPO,  
PERTH, Western Australia.

Dear Eleni,

Re Specificity of certain serological tests.

Because they have often consulted me about this, Joan Shenton has sent me a copy of your fax to her of 24 05 96. I am in entire agreement that these tests should be done. Your collaboration will add authority to the project and the additional groups suggested by you are appropriate. I would hope that all sera will be saved and that repeat tests will be performed on some of those giving clear positive and negative results. It might be a good idea also to bank some sera with an independent authority.

It is quite scandalous that your original paper in Biotechnology has not received official recognition as a basis for checking the entire testing procedure. I suggested this to our local expert and to Colindale some time ago, but without response. To avoid crossing wires with the current project, I shall take no further action meantime but, after the project or if it fails to gain approval, I am prepared to take up the issue more seriously with Colindale and with the Royal College of Pathology in which I am a Founder Fellow.

Have you any word from Biotechnology about the paper with Questions?

With kindest regards,

Yours sincerely,

G T Stewart.

cc Joan Shenton.

With best wishes for success in this  
worthy effort -
