Ref. The Russian Vaccine, the English Vaccine, the German vaccine the US-vaccine or the Chinese Vaccine?

Dear Sir/Madam

The Russian Vaccine Sputnik V, which works with two different adenoviruses as vectors instead of only one as the Astra Zeneca vaccine does, and therefore is administrated in two courses, the second one 21 days apart from the first, seems to be effective and not having immediate severe adverse effects. Its longer-term adverse effects on immune reactions are unknown, such as are the ones of different now administrated Covid-19 vaccines.

This vaccine, which is available for free for Russian citizens has been bought in high quantities by the Hungarian authorities, who made a fast course registration, not waiting for a registration by the EU-institutions in the Netherlands, as also by some other countries, because it is much cheaper than the ones from the Western producers. Dr. Angela Merkel, who was speaking of a possible importation of this vaccine some weeks ago, cannot do this now, following a common policy of the European Union and the protests against the incarceration of Alexei Navalny, even as she wants to fulfil the project of tubes under the Baltic Sea now to bring Russian gas to Germany.

If various types of vaccines become available in Europe, people will ask the sooner or the later for a free choice on the vaccine they want to take. The policy, that anyone automatically gets the vaccine that is available in a certain place at a certain time, can then not be held on any longer. A doctor who administrates vaccines now at the University Clinic in Zürich, stated that the now available vaccine is effective against the occurring mutations and said, that mutations are only important the actual a media-hype. That the WHO now

states that there is no proof until now, that the Astra-Zeneca vaccine is not effective against the South African mutants, shows in one fell, how much the WHO is today under the control of the GAVI-Association dominated by the Bill and Melinda Gates Foundation, that has invested enormous capitals into big vaccine producers.

As we can learn from the interview that the editor in chief of JAMA (the journal of the American Medical Association) has made with Anthony Fauci, head of the CDC, the USA has no need for the Russian vaccine Sputnik V and everyone should therefore better take the vaccines from Moderna, Pfizer-Biontech, Astra Zeneca or another vaccine from the Western product pipeline.

Dr. Fauci repeats in this interview the concept of the GAVI foundation, that only a world-wide vaccination program that reaches any human being on this planet, could halt Covid-19 and stop the occurrence of mutants of this virus. Neither air pollution by particulate matter and high levels of NO₂, CO₂ or O₃ nor the repeated spill-over of this virus from wild-life to farming animals and from them to humans plays any role in this concept, which should, according to the HIV-AIDS-concept that he promoted for many years, become the new US-paradigm on the cause of disease and a global health policy.

Dr. Fauci, who led the US AIDS-research policy for many years, asks now again for the fast development of antiviral drugs, comparable to the ones used against the posulated HIV-retrovirus. These have caused millions of deads world-wide in the last 30 years until they were replaced by the PreP and PeP drugs derivated from HAART, that underbind the sero-conversion to the test-result "HIV-positive" by suppressing the effects of AIDS-defining diseases such as Tuberculosis, Hepatitis A,B and C. Herpes I-IV, Chlamydia, Gonorrhoe, Syphillis and others, which now are treated in additon individually by specific antibiotics, whilst causing severe adverse effects when taken continuously. Dr. Fauci's theory on

the AIDS-pathogenesis from 1993, speaking of very long phases of latency, has turned out to be wrong in "non-progressors" who did not take the toxic antiviral drugs such as AZT, for which he was advocating for many years.
