Zürich 19<sup>th</sup> September 2021

**Open letter to Professor Christian Münz, Institute for Viral Immunobiology, on his role as a member of the Swiss federal scientific Covid Task Force promoting 3<sup>rd</sup> mRNA vaccination**

Dear Prof. Münz

In the interview that you gave to the newspaper Tages Anzeiger on August 31, you stated that a third vaccination with an mRNA vaccine from Biontech/Pfizer or Moderna must now be put in place because these vaccines, which are used in Switzerland, are only effective for six months in the prevention of the infection and then then only a mild or asymptomatic disease course has to be expected, whereby the virus can also be passed on to others for a short time.

Reinfections in them mainly would mean that immunity would be boosted and that one would be protected from infection again for the next six to twelve months. In people who go through a reinfection, you distinguish between two groups, those who did not build up good immune protection from the start and those in whom the immune response was originally sufficient but has worsened because the vaccination was a long time ago.

Because vaccinated people can be infected again after some months and can pass the virus on, it is almost impossible to achieve herd immunity, you say. Although the data are still very thin, everyone who was vaccinated in January should now have a third vaccination because the vaccination is very safe and does not hurt. It is still unclear where the sometimes violent vaccination reactions after Covid vaccinations come from. - It would be assumed that inflammatory reactions at the injection site would temporarily activate immune cells and react more strongly with the second dose, which disappears again after two months, while with a third vaccination after a few months less severe side effects should occur than after the second. A third vaccine dose should ideally be adapted to the prevailing Delta variant, you said, but such vaccines would not be available in the next few months.

In regard of your relationship with Biontech-Pfizer, you state, that it consists only in sitting in a committee selecting the best papers in the field of infectious diseases, immunology and allergology, which are subsequently awarded with a Pfizer award.

On February 11, you warned in the Swiss Magazine Beobachter that vaccinations with the virus-vector vaccine from Astra-Zeneca could lead to the importation of parts of the vaccine into the cell-nucleus DNA. The fact that mRNA vaccines could have similar effects, as it has been shown in a growing number of articles on autoimmune diseases after mRNA vaccinations, has never been an issue for you nor was it the list on adverse effects of this vaccine by the British health authorities. The Astra-Zeneca vaccine was never approved in Switzerland "due to lack of data", so that today only the two mRNA vaccines from Biontech/Pfizer and Moderna are available for all vaccinations in Switzerland and no other vaccines or therapies, and those vaccinated with Astra-Zeneca don't get a Corona certificate automatically when they come here.

According to the plans of the Federal Council, which is being advised by the Covid Task Force you belong to, the costs for tests for unvaccinated people will no longer be covered by the state from October on, making vaccination with mRNA vaccines practically mandatory, because otherwise visits to the Hospital, cinema, restaurant, bar, theatre or disco become unaffordable for the unvaccinated.

This would finally make Switzerland an exclusive test field for the mRNA vaccines from Biontech/Pfizer and Moderna. The fact that the certificate for those who have recovered is now to be invalid already after 3 months, although, as many studies show, in most cases, those who have recovered show long-term effective antibodies and flexible immune responses, also serves this purpose. A control group of non-vaccinated who don't suffer of severe chronic diseases should not exist. The rules that only those who have been tested, recovered or vaccinated can now enter schools, universities and all kinds of workplaces will, under the implementation of new restrictions, within short time, mean that only those who are vaccinated can do this.

Since the beginning of the Covid-19 pandemic, preventive measures for vulnerable groups or the control of their treatment for chronic diseases have been just as little an issue for you and the Covid task force as the role of particulate matter and nitrogen oxides in the excessive formation of angiotensin-converting enzymes (ACE-2), which is a prerequisite for the penetration of the Virus in the cell, or their role in the transport of the virus indoors and

outdoors or the blocking of the immune reactions in the epithelial tissues of the lungs, nose and throat, the cardiovascular system and the internal organs into which the virus can penetrate by them.

Your mouthpiece, the newspaper Tages Anzeiger, to which you are apparently in direct contact via Felix Straumann, a journalist who earlier worked for the University hospital of Zurich and continuously affects its setting of topics on Covid-19, accordingly declared considerations on such relationships consistently for unfounded, disqualified scientists, such as Prof. Sucharit Bhakdi, who wanted the side effects of the mRNA vaccine to be investigated, and paid homage to the virus theory of your cooperation-partner, Prof. Christian Drosten from Charité Berlin, who popularized the virus as the sole cause of the pandemic, which could be stopped solely by vaccines and strict contact bans in his video podcasts. Letters to the editor asking questions about this view were never published by the newspaper, which has been campaigning for these vaccines since its availability.

The Federal Council followed this line of its task force and ordered the closure of all terraces in ski resorts in the mountains in winter, although experts classified the transmission of the virus in the open-air areas as practically impossible and adopted measures for nursing homes leading for months to an almost complete insolation for its inmates.

With exception of CO<sub>2</sub> measuring devices for timely ventilation in schools, the federal council does not want to know anything about air purification devices in daycare centers, schools, nursing homes, government offices and shops, although such devices have been set up in schools and daycare centers in Germany.

Despite the warning that after the shutdown has been lifted, the old values of particulate matter, nitrogen oxide and ozone could be reached again within short time, with the result that people who had previously been damaged by these emissions would show more infections and serious illnesses—courses private car traffic was fully released again, so that the ozone limit values are exceeded again in many places, which are known to be congruent with the incidence and the severe course of Covid-19.

As we can learn now from various stories in your mouthpiece, Tages Anzeiger, there are vaccination breakthroughs, reinfections and infections with new virus variants occurring now in vaccinated people in Switzerland, "which should not lead to serious disease courses", but nevertheless sometimes require hospitalization. Obviously, you have said goodbye overnight to the much-invoked herd immunity meant to be

achieved through vaccinations worldwide, as well as to the theory that people with chronic diseases, immunosuppressive therapies and organ recipients could be protected from Covid-19 through the solidarity vaccination of the entire population, whilst continuously spreading the theory that vaccination is the only effective agent against Covid-19 which could prevent the development of new virus variants. The fact that such variants, as many recent studies show (see attached list), are built when nitrogen oxide, particulate matter and ozone levels are high and that the overexpression of ACE-2 the doorkeeper for SARS-Cov-2 occurs at high levels of particulate matter, nitrogen oxide and ozone is obviously still not worth discussing for you and your mouthpiece Tages Anzeiger.

The contracts that the federal government has concluded with the manufacturers of the mRNA vaccines are to remain secret for 10 years. In them the entire costs of liability suits due to side effects are transferred to federal government. A probably comparable contract made public by Investigating journalists from Albania in May shows the following terms and conditions.

- 8.1 **Indemnification by Purchaser.** Purchaser hereby agrees to indemnify, defend and hold harmless Pfizer, BioNTech, each of their Affiliates, contractors, sub-contractors, licensors, licensees, sub-licensees, distributors, contract manufacturers, services providers, clinical trial researchers, third parties to whom Pfizer or BioNTech or any of their respective Affiliates may directly or indirectly owe an indemnity based on the research, development, manufacture, distribution, commercialization or use of the Vaccine, and each of the officers, directors, employees and other agents and representatives, and the respective predecessors, successors and assigns of any of the foregoing (“**Indemnitees**”), from and against any and all suits, claims, actions, demands, losses, damages, liabilities, settlements, penalties, fines, costs and expenses (including, without limitation, reasonable attorneys’ fees and other expenses of an investigation or litigation), whether sounding in contract, tort, intellectual property, or any other theory, and whether legal, statutory, equitable or otherwise (collectively, “**Losses**”) arising out of, relating to, or resulting from the Vaccine, including but not limited to any stage of design, development, investigation, formulation, testing, clinical testing, manufacture, labeling, packaging, transport, storage, distribution, marketing, promotion, sale, purchase, licensing, donation, dispensing, prescribing, administration, provision, or use of the Vaccine.
  
- 8.2 **Assumption of Defense by Purchaser.** The Indemnitee(s) shall notify Purchaser of Losses for which it is seeking indemnification pursuant hereto (“**Indemnified Claims**”). Upon such notification, Purchaser shall promptly assume conduct and control of the defense of such Indemnified Claims on behalf of the Indemnitee with counsel acceptable to Indemnitee(s), whether or not the Indemnified Claim is rightfully brought; provided, however, that Purchaser shall provide advance notice in writing of any proposed compromise or settlement of any Indemnified Claim and in no event may Purchaser compromise or settle any Indemnified Claim without Indemnitee(s)’s prior written consent, such consent not to be unreasonably withheld. Indemnitee(s) shall reasonably cooperate with Purchaser in the defense of the Indemnified Claims.

- 8.4 **Assumption of Defense.** Notwithstanding the foregoing and without prejudice to Section 12.6, Pfizer, directly or through any of its Affiliates or through BioNTech, may elect to assume control of the defense of an Indemnified Claim (a) within thirty (30) days of Indemnatee's notice to Purchaser of the Indemnified Claim or (b) at any time if, in Pfizer's sole discretion: (i) Purchaser fails to timely assume the defense of or reasonably defend such Indemnified Claim(s) in good faith to the satisfaction of Pfizer (or Pfizer's Affiliates and BioNTech); or (ii) Pfizer believes (or any of Pfizer's Affiliates or BioNTech believe) in good faith that a bona fide conflict exists between Indemnatee(s) and Purchaser with respect to an Indemnified Claim hereunder. Upon written notice of such election, Pfizer shall have the right to assume control of such defense (directly or through either one of its Affiliates or BioNTech), and Purchaser shall pay (as incurred and on demand), all Losses, including, without limitation, the reasonable attorneys' fees and other expenses incurred by Indemnatee(s), in connection with the Indemnified Claim. In all events, Purchaser shall cooperate with Indemnatee(s) in the defense, settlement or compromise of the Indemnified Claim.
- 

In May, the Federal Councilor, Alain Berset, who relies entirely on mRNA technology, invested 50 million federal funds in mRNA-technology research, as the SRF interview with PD Dr. Steve Pascolo shows, who is doing now such research at the University Hospital Zurich, after he was previously managing director of Miescher Pharma GmbH, developing the Curevac vaccine.

<https://www.usz.ch/interview-steve-pascolo/>

As a rapidly growing number of studies now show, vaccinations with mRNA vaccines lead to various autoimmune diseases such as autoimmune hepatitis, kidney failure, peripheral edema, thrombocytopenia, myocardial inflammation, blood lysis, rhabdomyolysis, purpura, etc, occurring concentrated in patients who received a third vaccination shot. A record on the side effects of the Biontech-Pfizer vaccine by the British Health authorities showed a big variety of adverse effects. Its further development is not known by now.

[https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment\\_data/file/975808/COVID-19 mRNA Pfizer-BioNTech Vaccine Analysis Print.pdf](https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/975808/COVID-19_mRNA_Pfizer-BioNTech_Vaccine_Analysis_Print.pdf)

Until now, Swissmedic, the national institution for registration of vaccines and medicaments has received 6,600 reports on adverse effects, 2/3 of which were considered of being serious. The conditions for reporting such adverse effects for medical doctors were set very high. There are no known long-term side effects of mRNA vaccines state Dr. Christoph Berger, head of the Swiss Vaccination committee, and Prof. Manuel Battegay from the Basel University Clinic, meaning that the vaccines are safe.

How you, the Covid Taskforce and the Federal Council want to deal with such side effects of the mRNA vaccinations, which

are very difficult to treat, we will certainly learn from your mouthpiece, the Tages Anzeiger, over time.

It will certainly also tell us by which therapies they should be treated in various disease conditions, and that they should not prevent anyone from having a Covid vaccination with the mRNA vaccines now which are the only vaccinations now available in Switzerland. It will also explain to us the treatment of such adverse effects in emerging and developing countries, where there are hardly any means available for the treatment of such autoimmune diseases, and in the end certainly also tell us how it could come about that vaccines showing such adverse effects could be registered without the necessary tests in an urgent procedure and what role media such as the Tages Anzeiger played in this. The many new preparations against Covid-19 which are under way, but not in front at the rally will probably later become an issue, after everyone has got the mRNA-vaccination.

"I don't think that the Novavax vaccine will produce more unwanted side effects", you let us know in your second mouthpiece, Beobachter. "However, the adjuvant effect will probably be less than with the mRNA vaccines. Even though it does not seem wise from any perspective to wait until the Novavax vaccine is available before vaccinating everybody".

The fact that this vaccine, in which an artificially produced spike protein of SARS-Cov-2 is integrated into a nanoparticle containing the effect enhancer, soap tree, against which antibodies then are directly formed, has shown in studies to be as effective as the mRNA vaccines, but should have significantly fewer side effects than these, as successful vaccines of this technology against hepatitis B, whooping cough and diphtheria have shown, is no reason for you to discontinue the program of forced mass vaccination with mRNA vaccines in Switzerland.

That the Federal Council, following your announcements says now, that anyone who does not want to receive a vaccination with an mRNA vaccine should in future be able to receive a virus-vector vaccine from Johnson & Johnson, with possible side effects of which you have warned us in February in the case of the similar Astra Zeneca vaccine, shows a new deception for the purpose of vaccinating all Swiss with the Biontech Pfizer or Moderna vaccine. The Federal Council is of course not talking about the fact that anyone who does not want to receive an mRNA vaccine can be tested free of charge until other vaccines or therapies are available. New therapies and new vaccines, such as the DNA vaccines currently being tested in India, are apparently not an issue for them.

We can look forward now how the Federal Councilor, Alain Berset, wants to get out of the impasse of the one-sided and totalitarian Covid-19 policy, he has led us into together with you and other members of the Covid Task Force.

Felix de Fries
