The Devasting Case against vaccine-pusher Pfizer Long lasting, biochemically modified mRNA, its frameshifting spike proteins in human tissues after COVID-19 vaccination

Dear Sir/Madam

As you may learn from the latest article by Neville Hodgkinson, the mRNA-vaccine from Pfizer, marketed as safe for pregnant woman is probably linked to infertility, loss of litters, and stillborn offspring and causes heart conditions as myocarditis and pericarditis.

https://www.conservativewoman.co.uk/the-devastating-case-against-vaccine-pusher-pfizer/

A growing number of articles in known, scientific medical papers treat now the effect of mRNA-vaccines inducing frameshifting and recombinant spike proteins.

The rapid waning of the effect of mRNA-vaccines, which makes repeated vaccination necessary after short time, induces these side effects continuously in those affected.

Christian Drosten and the producers of the mRNA-vaccines don't want to speak about these side effects, stating that frameshifting is a natural mechanism, that does not cause any dysfunction. By this argument, they want to have a permission

for an uncontrolled development for mRNA-vaccines for infections and various forms of cancer and the right to start trials with affected persons.

It is urgent now, to establish clear regulations for further experiments with mRNA-vaccines and guarantee, that anyone has a free choice if she or he wants to do a vaccination, and if so, of what kind such a vaccination should be or if a preventive treatment would be appropriate.
