ref. **MD Wolfgang Wodarg et all: Post Vac Orientation Guide**

Dear Sir/Madam

Dr. Wolfgang Wodarg, medical doctor and earlier Member of the German Parliament has formulated with colleges a complete orientation guide on the disorders occurring in various organs after shorter or longer time, following the administration of mRNA-vaccines for SARS-Cov-2, which have been developed by Biontech-Pfizer and Moderna, the co-owner of the Wuhan-Institute of Virology, and administrated world-wide to millions of people.

https://hackenberg-hm.de/c-downloads/en/Post-Vac-Orientation-guide.pdf

These severe, lasting disorders, named as post-Covid or long-covid and often attributed to SARS-Cov-2, the virus that has been developed together with these vaccines at the Wuhan-Institute for Virology, turn often up after the repeated vaccination with the so-called boosters and cannot be treated successfully in many cases causing invalidity in many people.

As the producers of these vaccines such as Biontech-Pfizer and Moderna have excluded the liability for adverse effects in their contracts with the individual states, people affected cannot receive compensation even if they take legal action in court. The many States, who have taken over such liabilities raise high hurdles for proof of side effects and claims for damages and often do not pay out any money to those affected even after lengthy proceedings.

Dr. Wolfgang Wodarg and his colleges show in their orientation guide possible treatment measures for each of the disorders occurring after the administration of mRNA-vaccination and discuss the laboratory parameters to control it.

Let us see, whether medical institutions now show any interest in these treatment measures and in research on them, and whether those affected now get compensation for such treatments and for their invalidity.
